

MedDecSup 2011

International Workshop on Next Generation  
Intelligent Medical Support Systems

Târgu-Mureş Romania  
September 18, 19, 2011

# AnticipationScope<sup>©</sup>

Prof. Dr. Mihai Nadin, University of Texas at Dallas; Ashbel Smith University Professor;  
Director, Institute for Research in Anticipatory Systems; Distinguished Fellow,  
Hanse Wissenschaftskolleg/Institute for Advanced Study, Delmenhorst, Germany

Invited Speaker

antÉ

Institute for Research in Anticipatory Systems

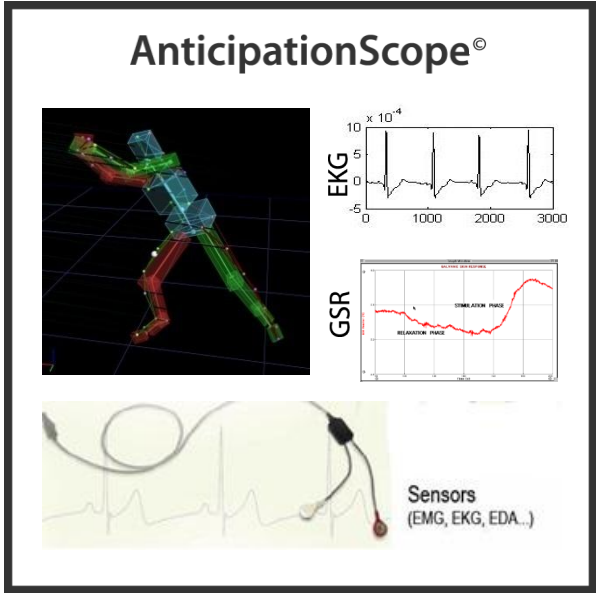

# Design and implementation of an integrated information processing platform for quantifying an individual's adaptive capabilities

**1790**

**2006** in progress

# Neural profile

Infrared eye tracking

Functional brain imaging

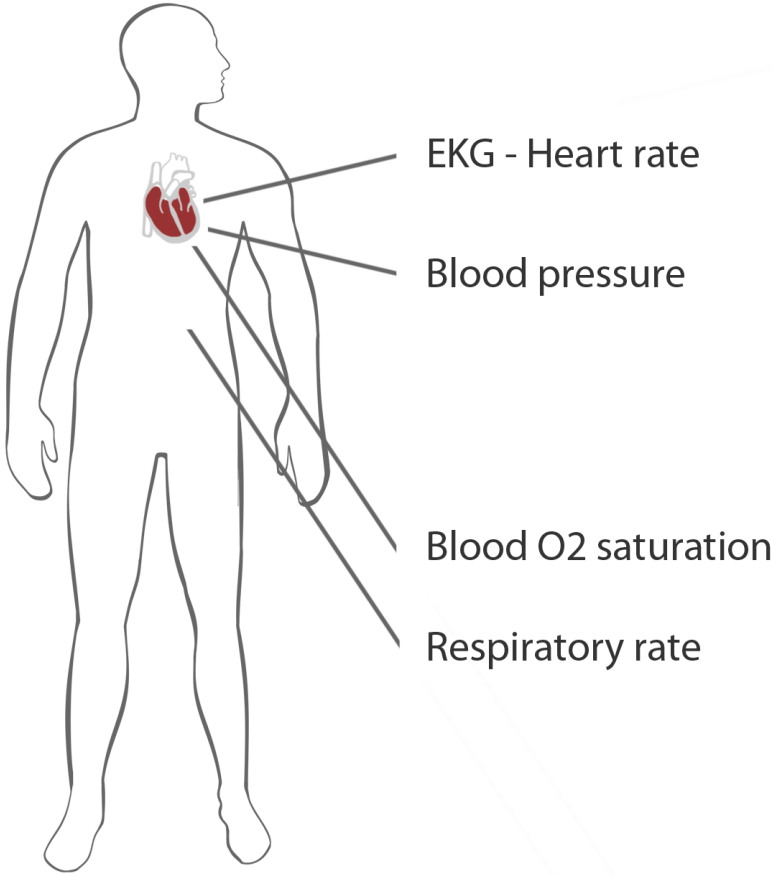

Transcranial magnetic stimulation (TMS)

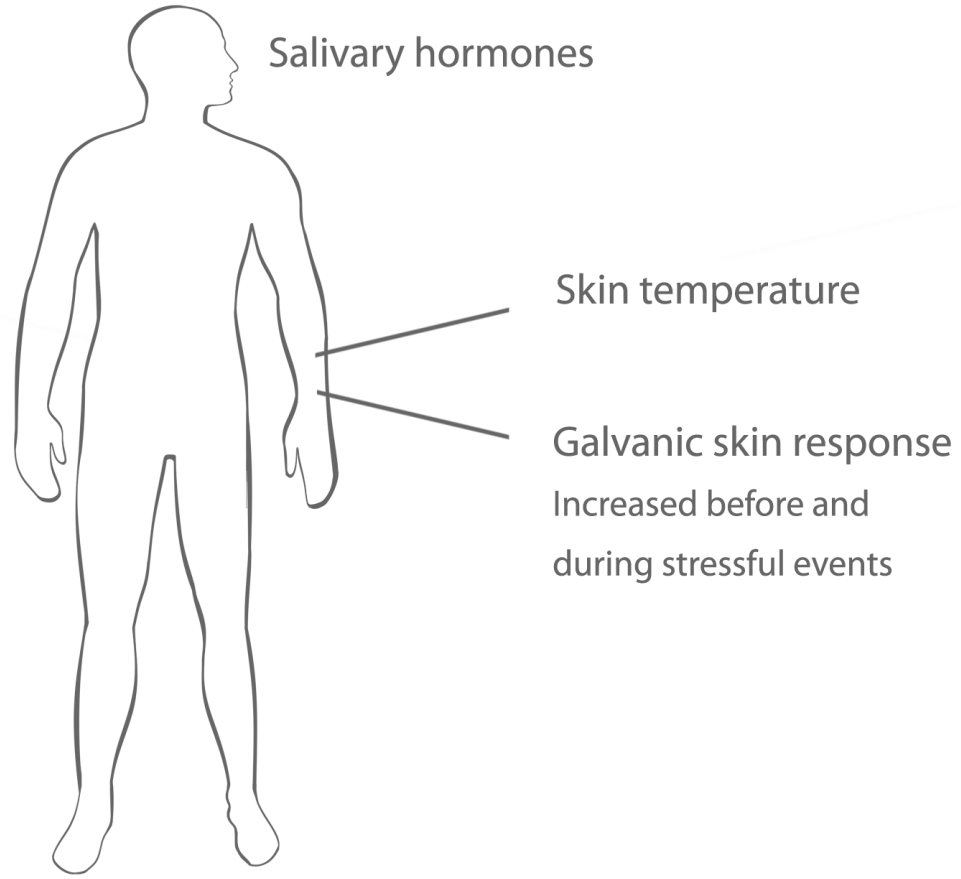

Topographic brain mapping

# Cardiovascular profile

# Temperature, stress and hormonal profile

# Motor dynamics profile

Electromyogram (EMG)  
Measurement of muscle activity

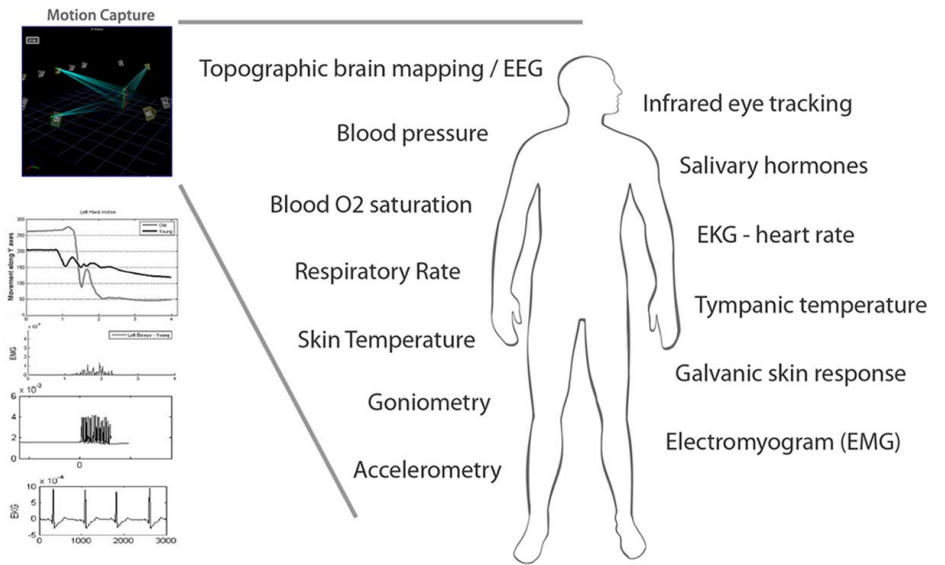

Accelerometry  
Measurement of limb velocity

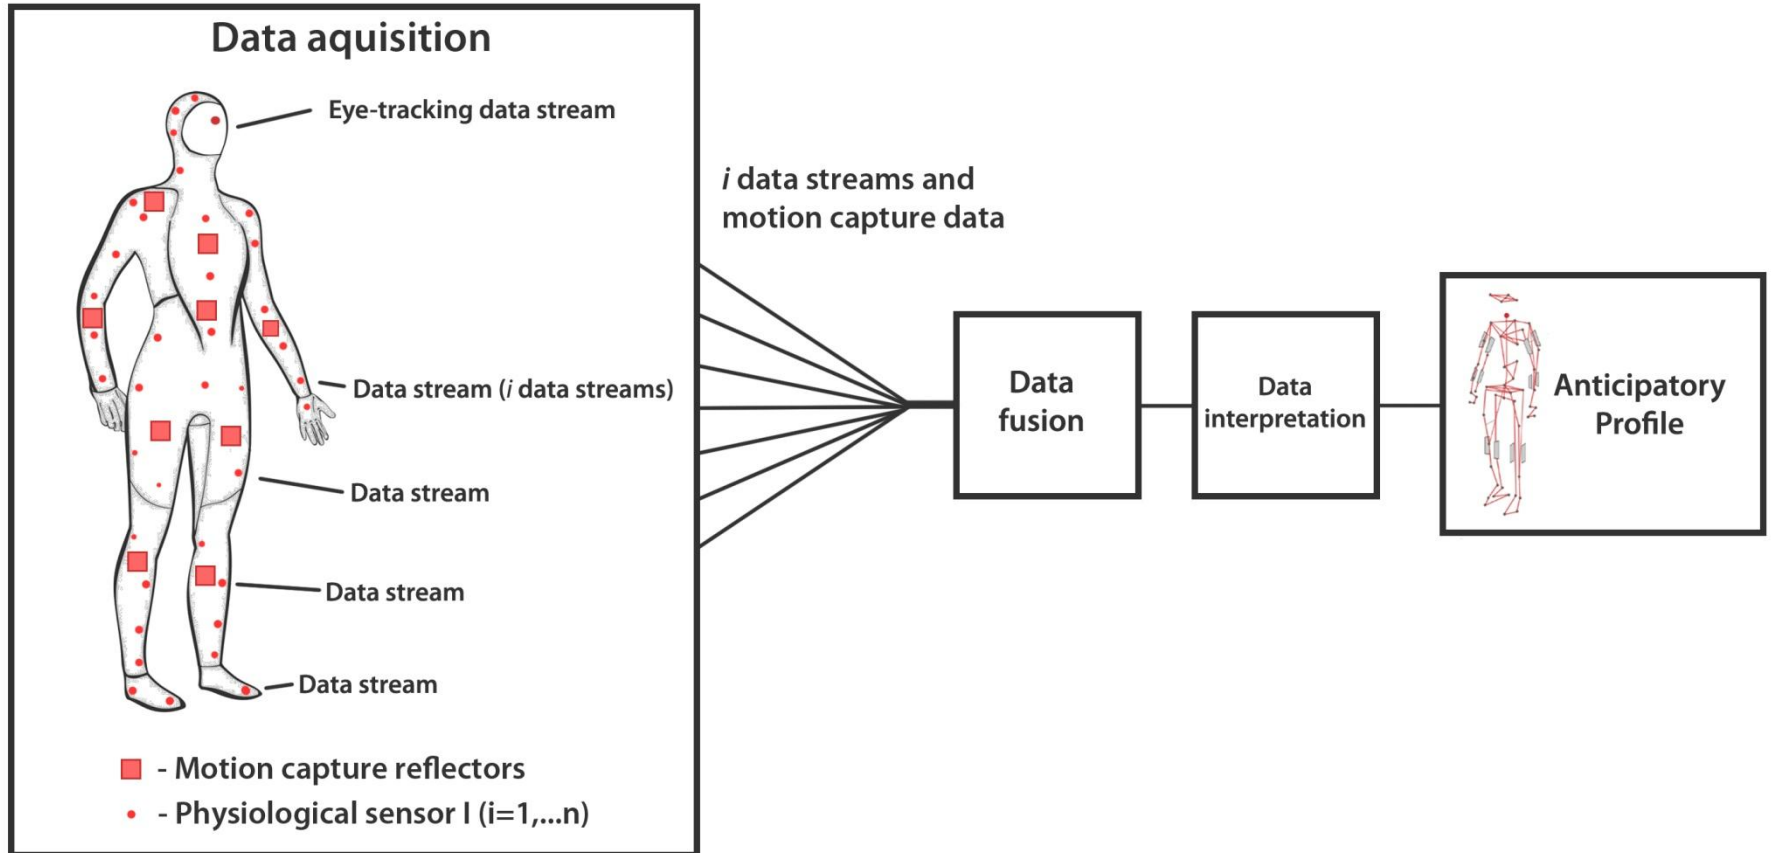

Goniometry  
Measure range of motion  
and joint angles

Force plates

# Integration: The Anticipatory Profile

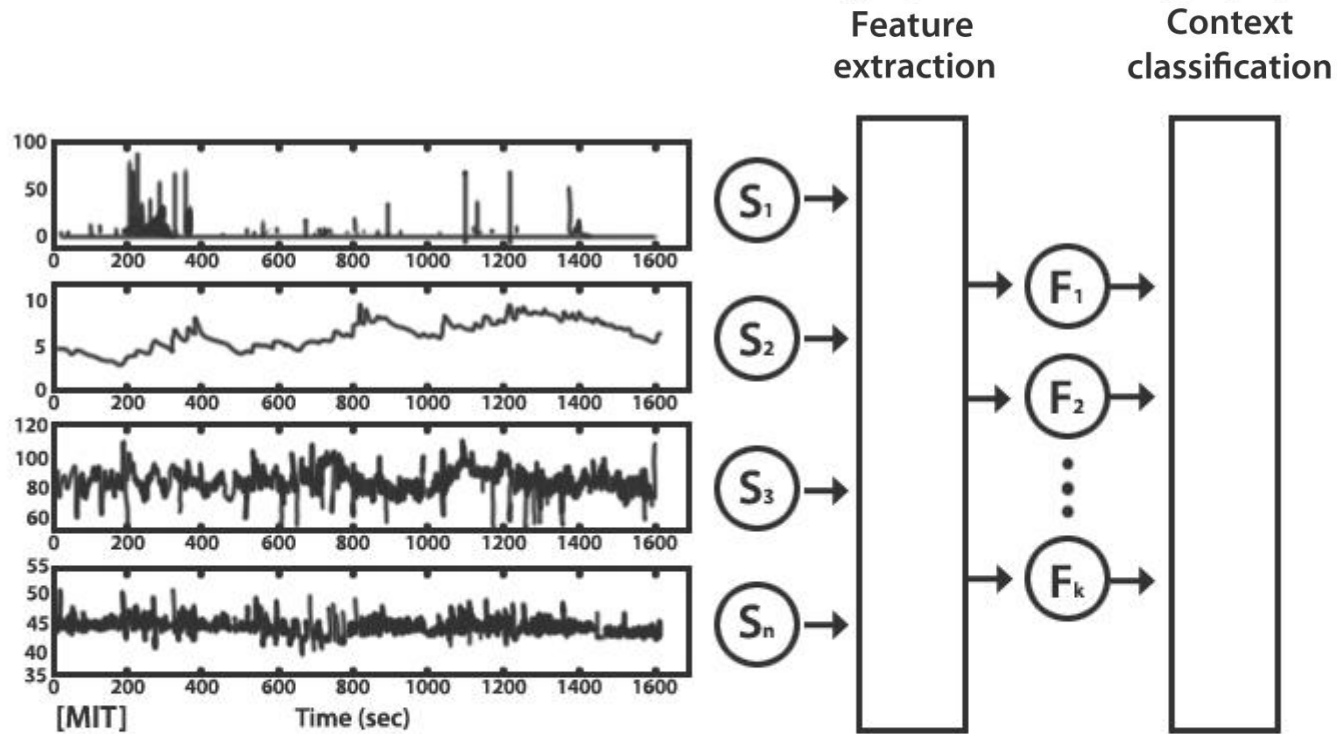

# Information processing model

# Multisensor integration and context prediction

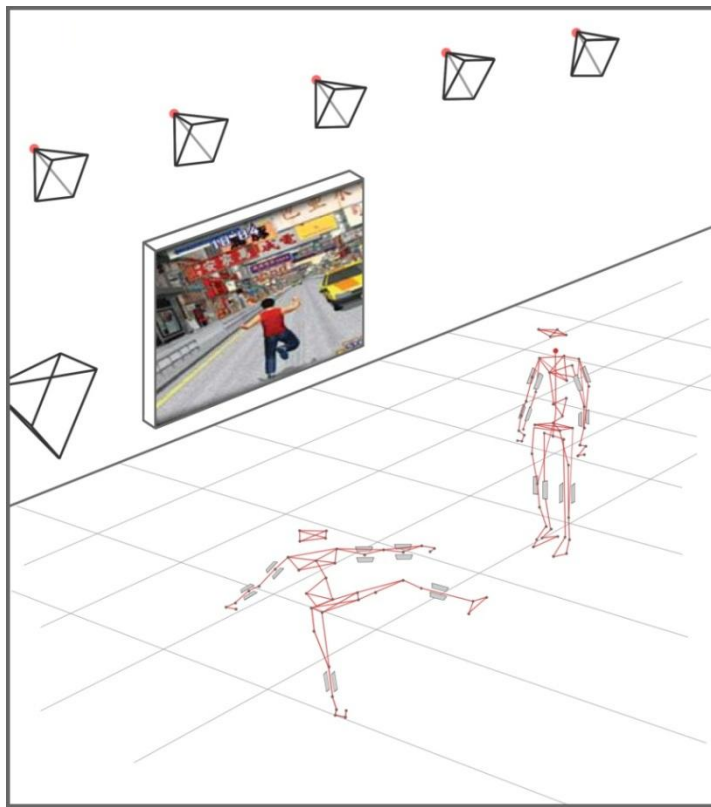

Sensors - for example,  
EMG on the masseter muscle (in microvolts)  
Skin conductance waveform (in micro-Siemens)  
Heart rate (in beats per minute)  
Respiration waveform (in % expansion)  
...

Pattern Recognition

Clustering:  
Partitioning  
Heirarchical  
Density-based  
Grid-based  
Model-based

# Architecture of the integrated AnticipationScope<sup>©</sup>

Multi-dimensional  
time series streams  
(motion capture,  
heart rate, EMG,  
EKG, eye tracking, etc)

Multivariate  
classification  
↑  
Data fusion  
Statistical analysis  
↓  
Correlations

AnticipationScope<sup>©</sup>

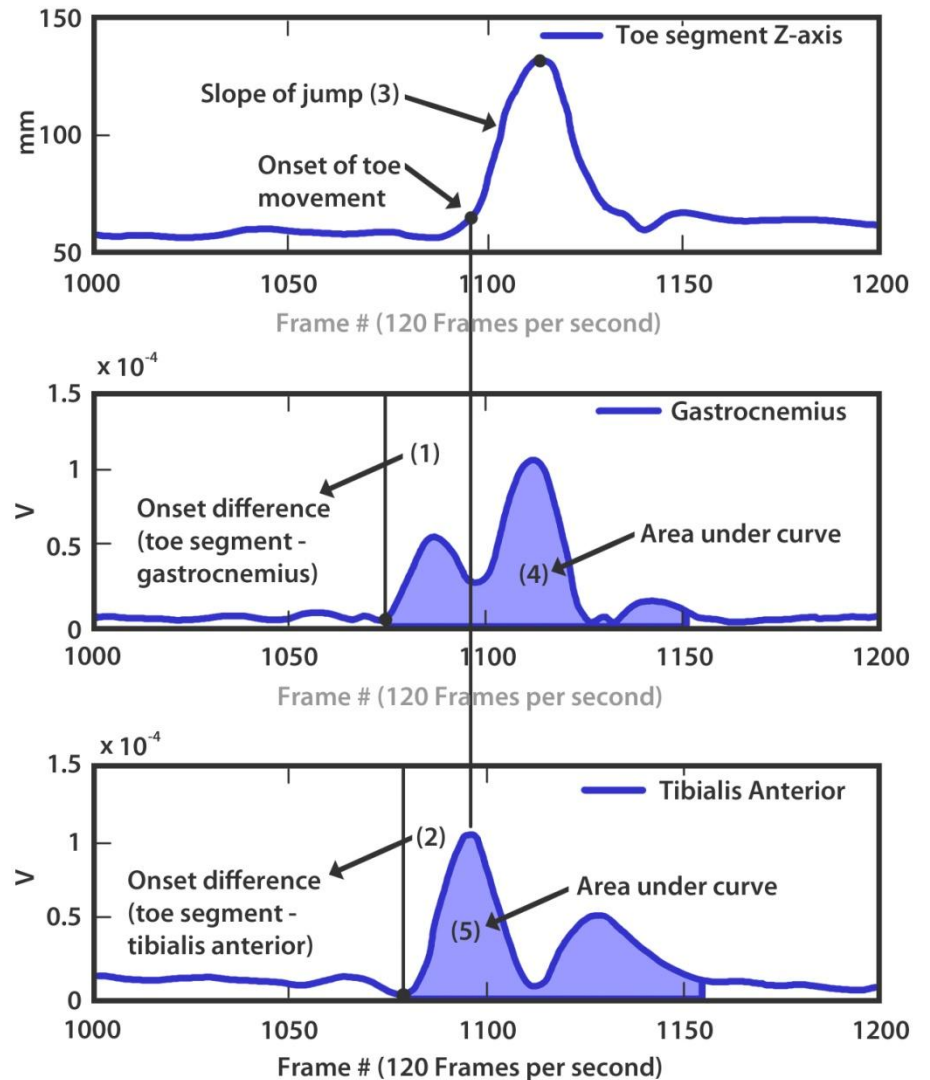

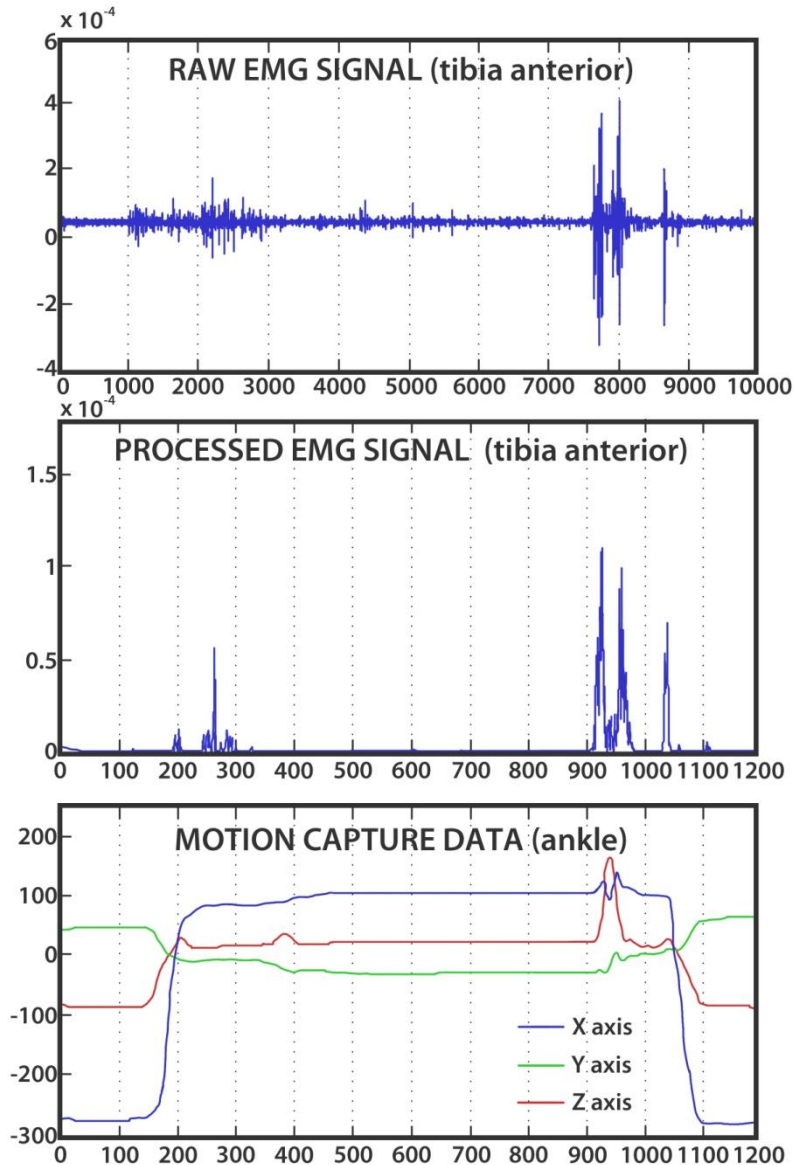

# Preliminary integrated setup

# Preliminary data

## Single trial of EMG and motion capture data

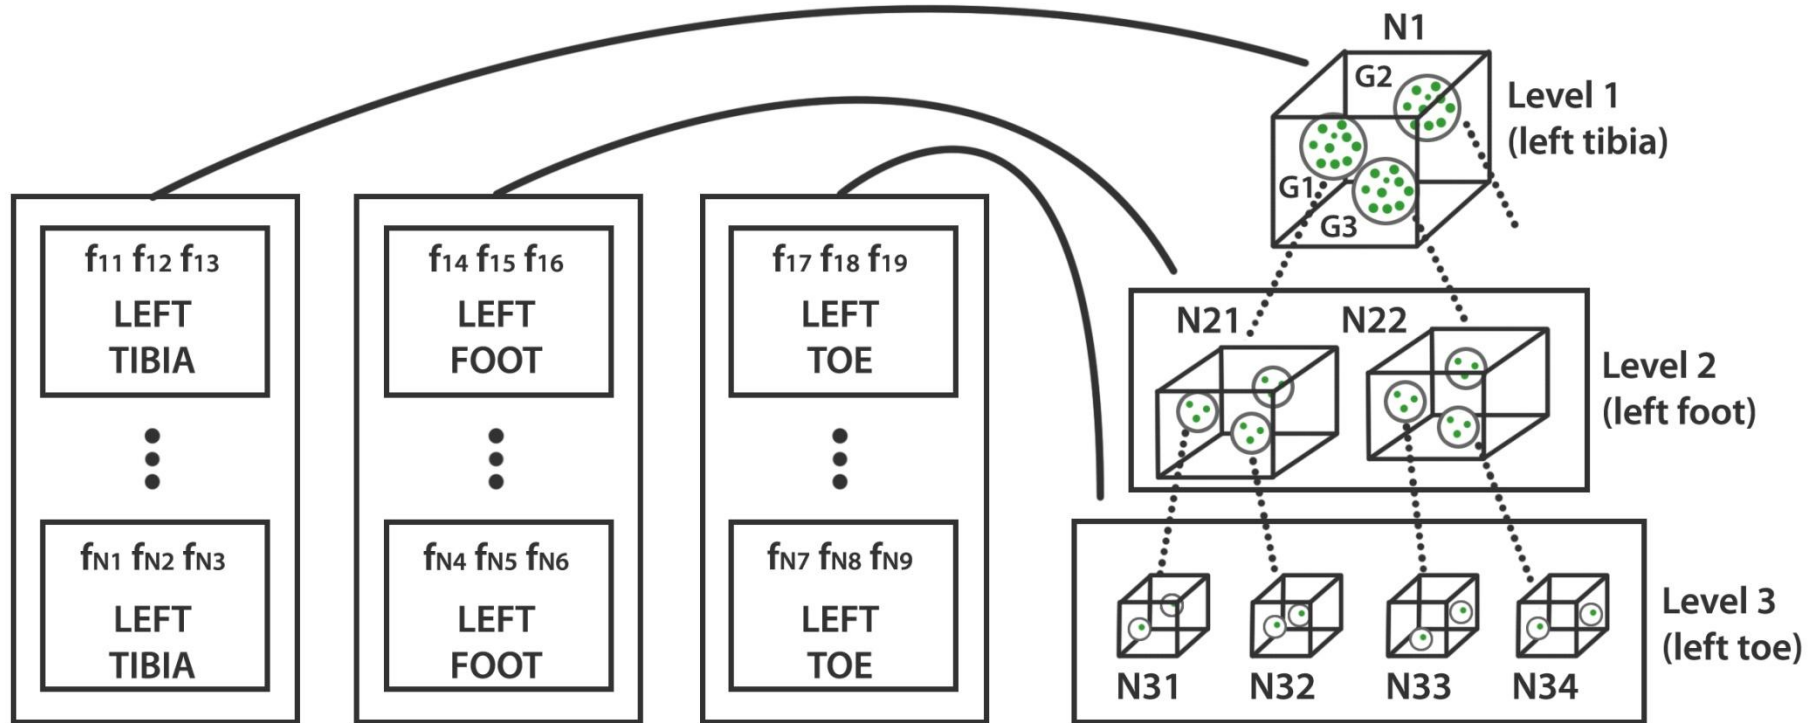

## Extraction of EMG parameters

# Example:

Interpreting and classifying human motions using 3D motion capture

Sample hierarchical indexing tree structure for left leg segments:

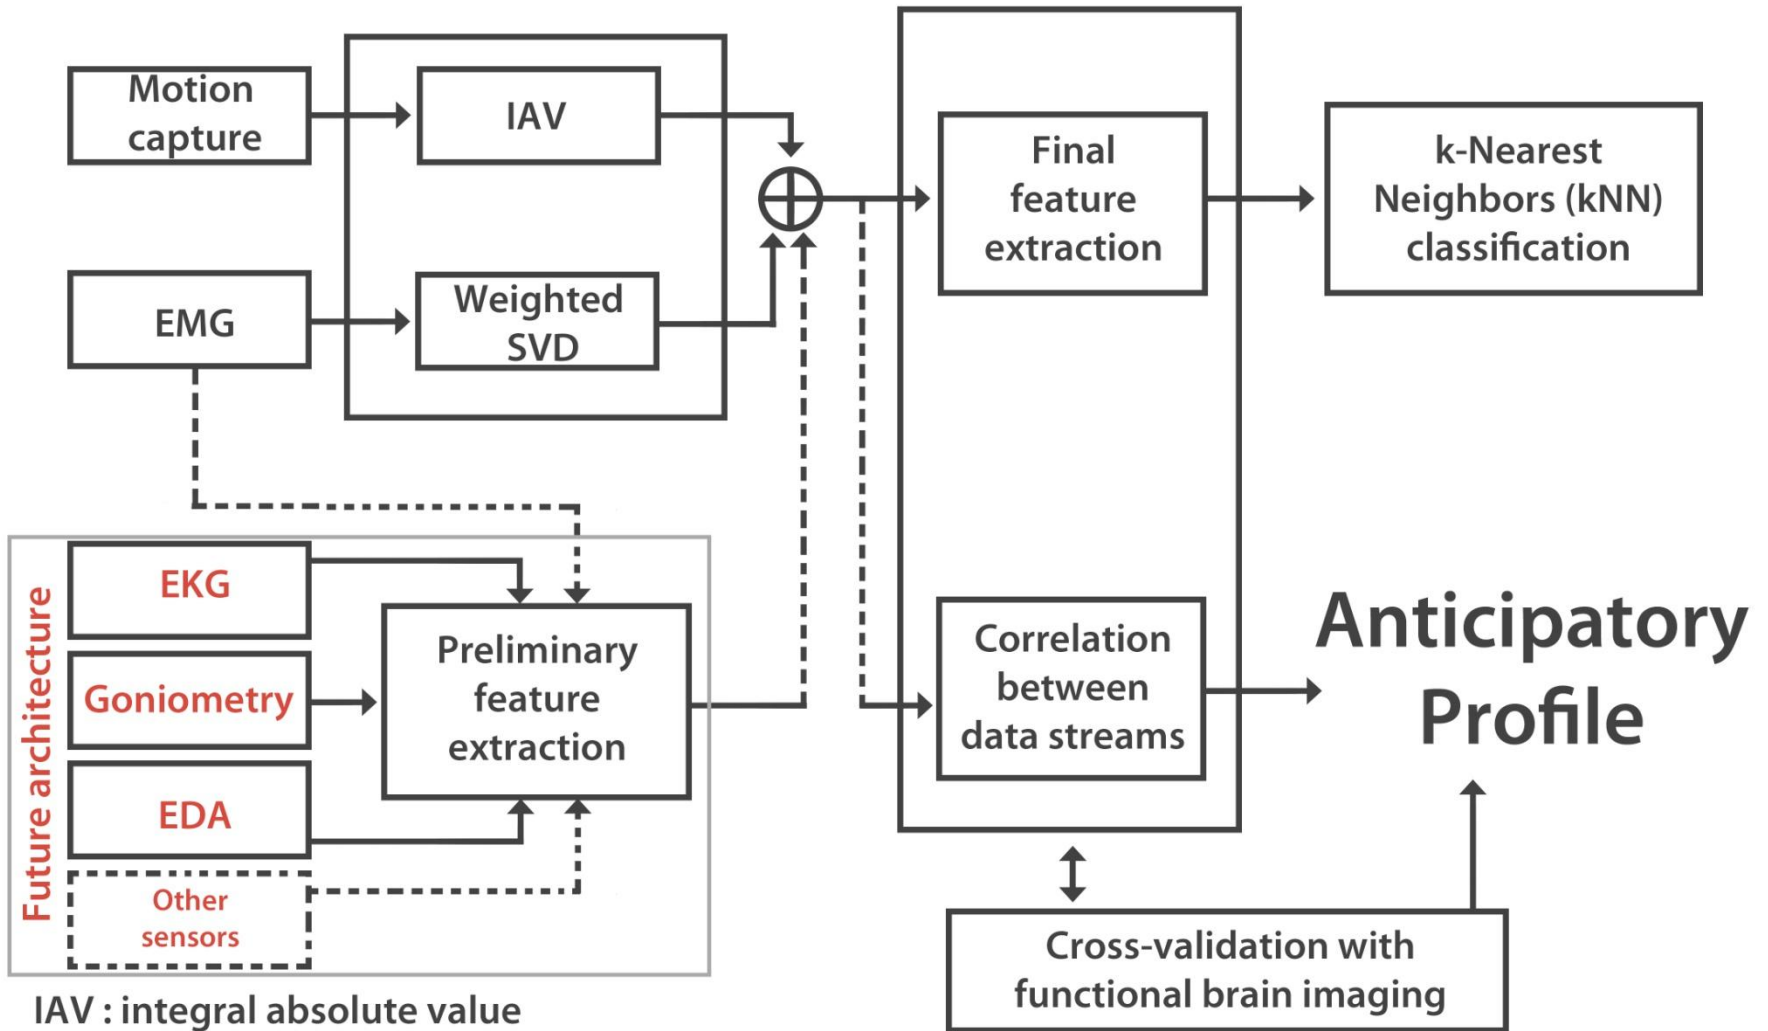

$[f_{i1} f_{i2} f_{i3}]$ : weighted SVD feature vectors for Motion "i"

$1 \leq i \leq N$ , where  $N$  = number of motions

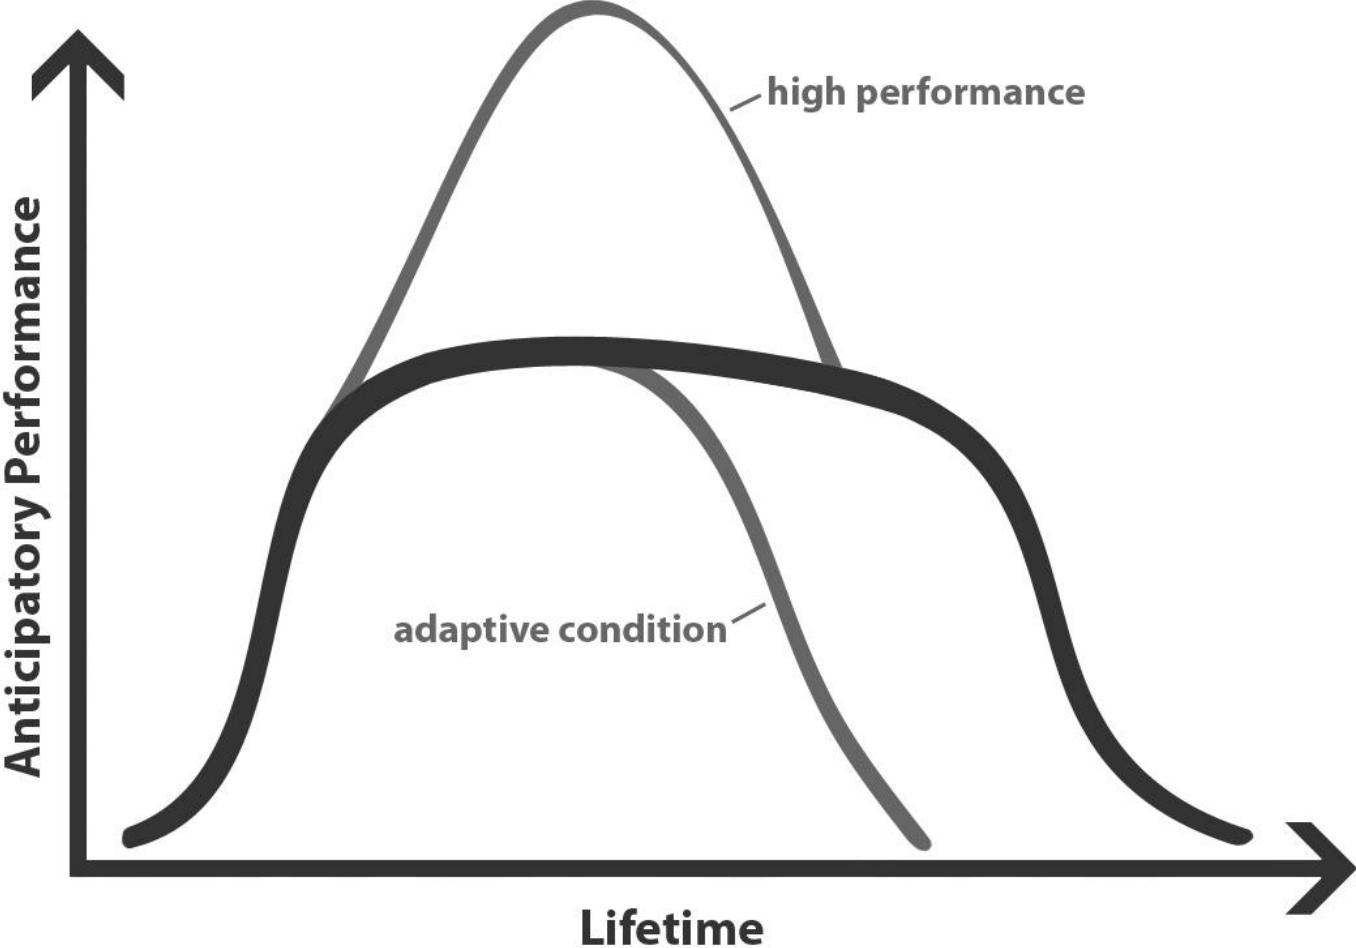

# Data fusion and analysis model

Current architecture

IAV : integral absolute value  
SVD: singular value decomposition

# Dynamics of anticipatory performance

# AnticipationScope® as a diagnostic information processing procedure

Sensors (EMG, EKG, EDA...)

EKG  $\times 10^{-4}$

GSR

Stimulation Phase  
Relaxation Phase

AnticipationScope Software Interface

# Post-traumatic stress disorder (PTSD)

Sound and light sensitivity

## AnticipationScope<sup>©</sup>

Sensors  
(EMG, EKG, EDA...)

Electrodermal response

Blood pressure

Heart rate

Motion capture

Concept Development:

**PTSD Scope  
and  
PTSD Profile**

# Parkinson's disease

Loss of anticipatory characteristics

Early detection

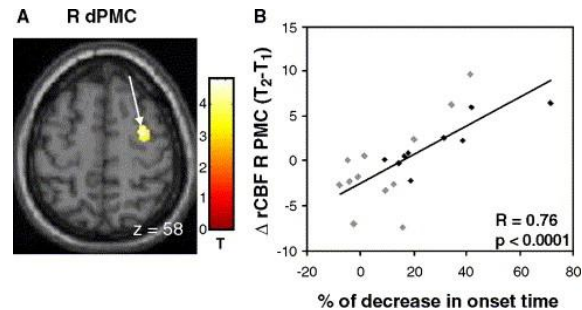

Evaluation and monitoring

# AnticipationScope<sup>©</sup>

## Paired pulse inhibition

## Validation with brain imaging

# Autistic spectrum disorders

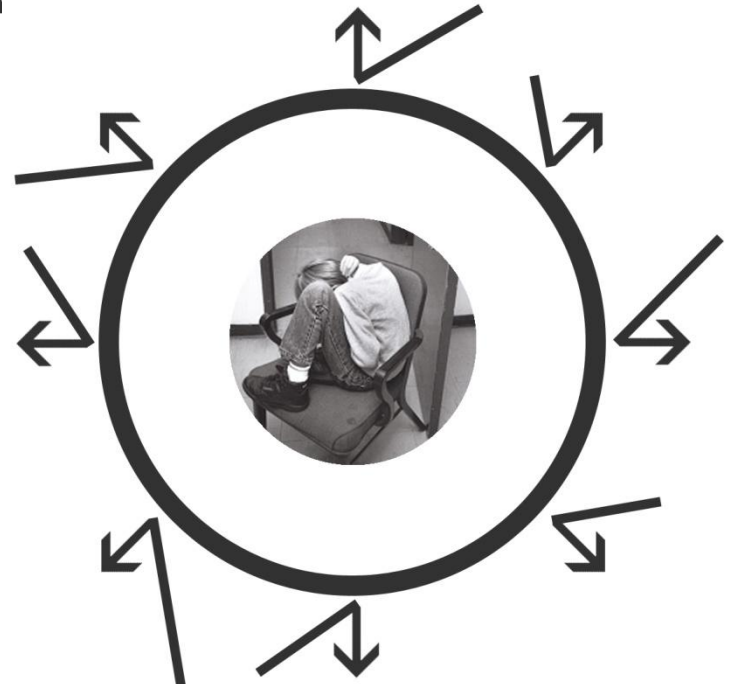

**Multi-sensory stimulation**  
**Social interaction**

**Validation with  
brain imaging**

**Focused, repetitive behavior**  
**Imitation**  
**Social communication**  
**Social isolation**

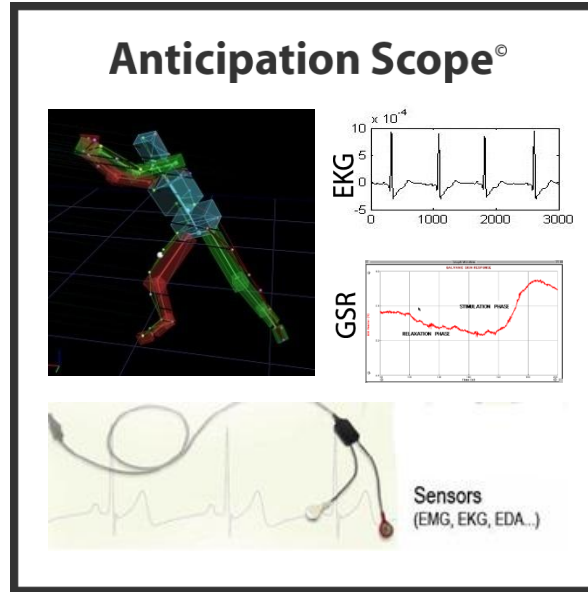

# Alzheimer's disease

**Early detection of mild cognitive impairment (MCI)**

**Evaluation and monitoring**

**Validation with brain imaging**  
**Detecting subtypes and variations**

## Possible early detection of neurological and psychiatric conditions in the AnticipationScope ©

- Schizophrenia
- Bipolar disorders
- Obsessive compulsive disorder
- Attention deficit hyperactivity disorder
- Epilepsy
- Amyotrophic lateral sclerosis (Lou Gehrig's disease)

## Possible cross-validation of the diagnostics in the AnticipationScope<sup>©</sup> for tracking therapeutic outcome

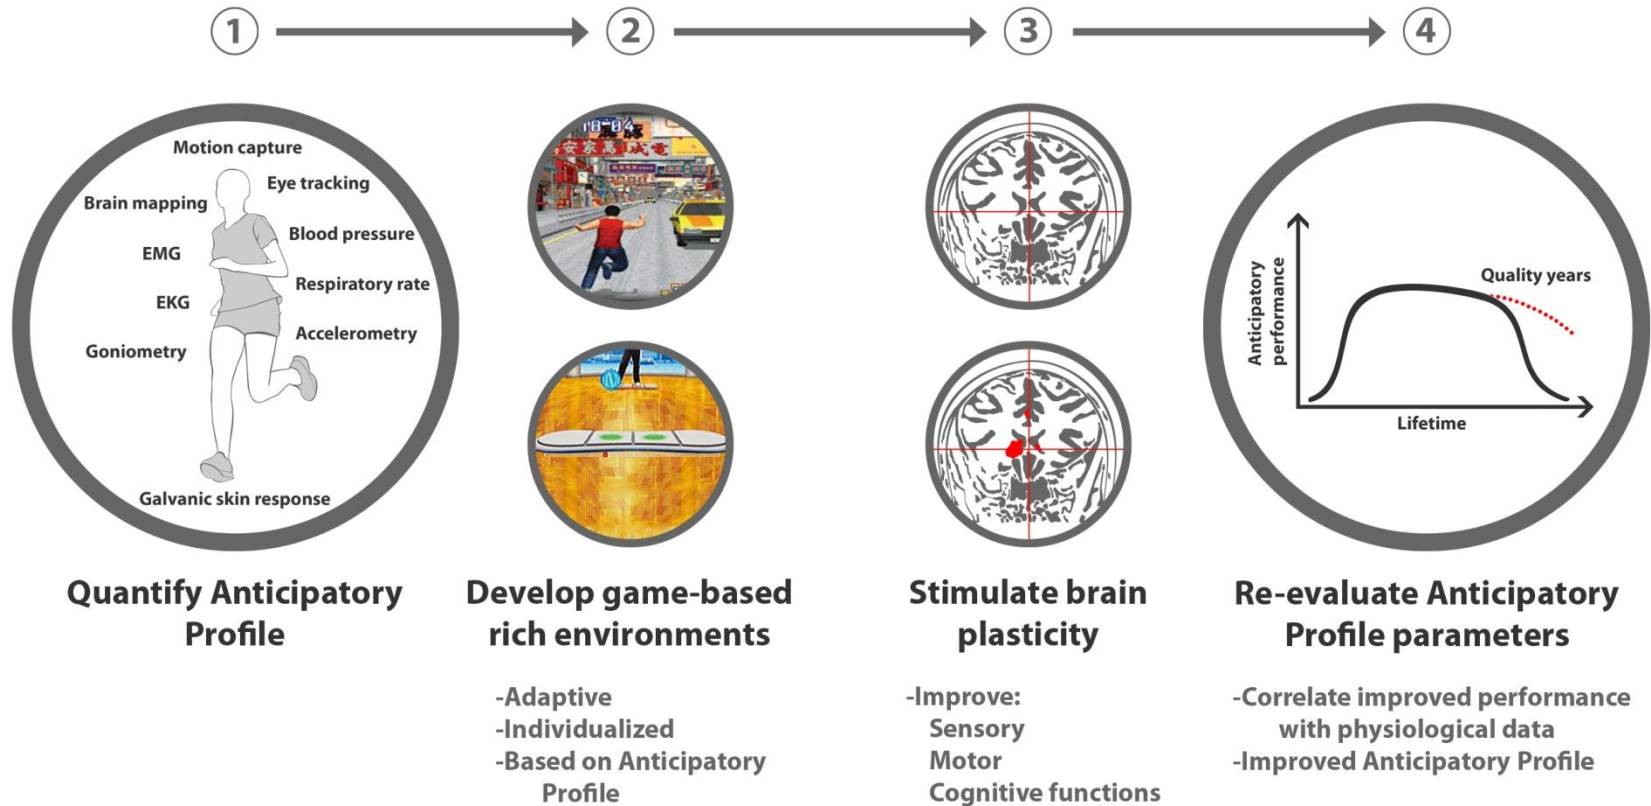

- AnticipationScope<sup>©</sup>
- Structural brain imaging:
  - Diffusion tensor imaging and brain morphometry
  - CT scan, MRI scan
- Functional brain imaging
- Cerebrospinal fluid (CSF) and other pathology analysis
- DNA micro-array analysis (e.g., genetic predisposition)
- Correlation with clinical criteria (e.g., signs and symptoms)
- Hormones, neurotransmitter assays (e.g., stress)

## Other possible functions of the AnticipationScope®

- Environment for matching abilities to performance requirements
- Training and performance profile
- Homeland security profiling
- Computer compensated human performance (hybrid machines)
- Anticipation of extreme events and human response

# Individualized game-based behavioral therapy

AnticipationScope as therapy evaluation platform

**Example:**

**Game based simulation of variable contexts for action (e.g. extreme events)**

# Plans for a mobile wireless AnticipationScope<sup>®</sup>: Integrated motion capture with biosensors

## MOTION CAPTURE

### Infrared Eye-tracking

Measurement of eye movements and saccades during cognitive and motor tasks

### Blood Pressure

Measure fluctuations in systolic and diastolic pressure

### Pulse Oximeter

Measurement of blood oxygen saturation

### Skin Temperature

Measurement of the day to day, minute by minute variations

### Goniometer

Measurement of joint angle (radians)

### Electromyogram (EMG)

Measurement of bio-electrical muscle activity

### Accelerometer

Measurement of limb acceleration

### Tympanic Temperature

Brain activity during cognitive tasks → cortical blood flow → change in carotid blood flow → change in temperature

### Somatosensory Evoked Potentials

Scalp electrical potentials recorded from the somatosensory area of the brain

### Electrocardiogram (EKG)

Measure heart electrical activity (rate, rhythm, etc)

### Spirometer

Measurement of respiratory rate, lung volume, etc

### Galvanic Skin Response Meter

Measurement of changes in sweat gland salt conductance (e.g., increased in anticipation of stressful events)

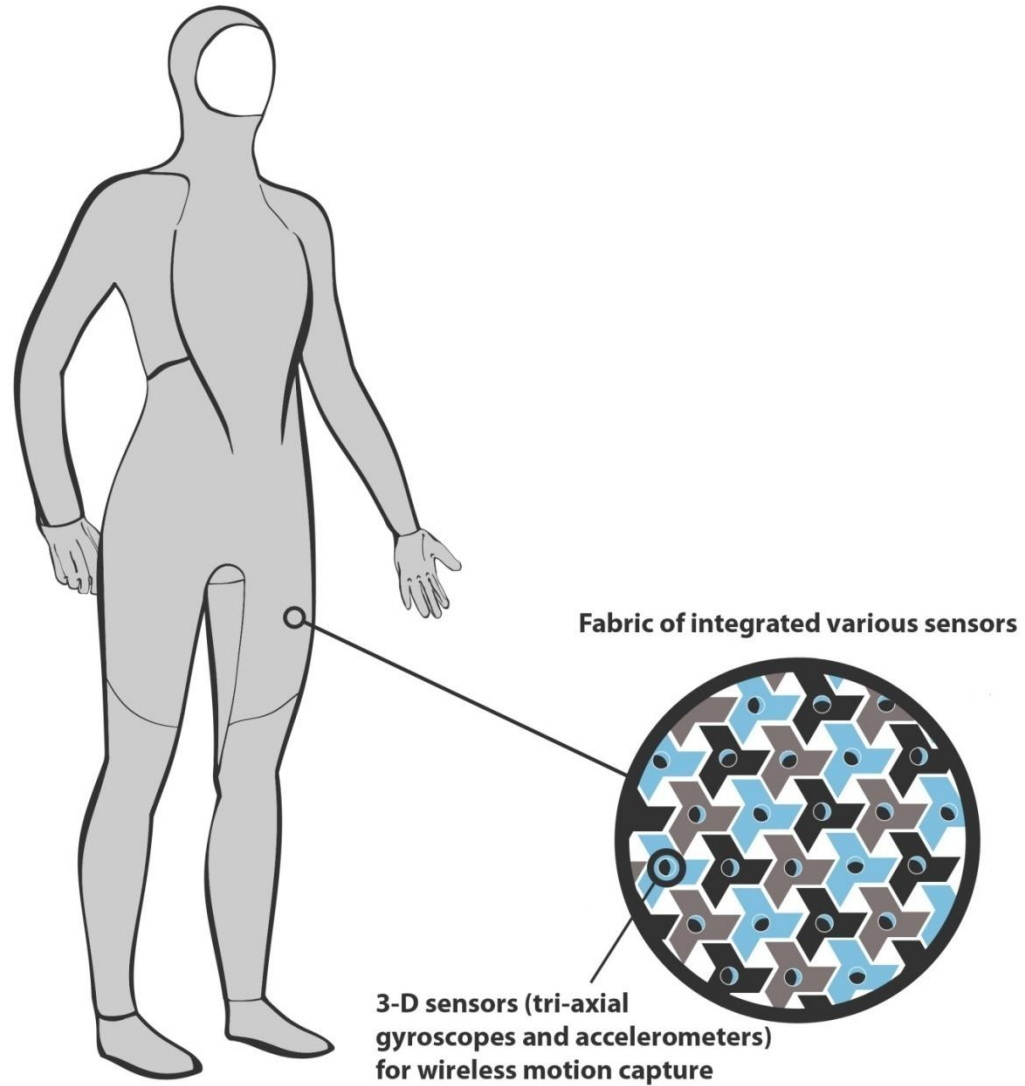

### Salivary Hormones

Measurement of sex hormones (estrogens and testosterone) that vary with cognitive tasks

### Topographic Brain Mapping/EEG:

Simultaneously mapping the electrical activity of diverse brain regions during cognitive tasks

# The future: wearable AnticipationScope<sup>®</sup>

**Research team:**

**Prof. Dr. Mihai Nadin**  
Ashbel Smith University Professor  
Institute for Research in Anticipatory Systems, UT Dallas

**Dr. Michael Devous,**  
Brain Imaging, UT SouthWestern

**Dr. Balakrishnan Prabhakaran**  
Computer Science, UT Dallas

**Dr. Navzer Engineer**  
Neuroscience, UT Dallas

**Gaurav Pradhan**  
Ph.D. candidate, Computer Science, UT Dallas
